

# Engineering & Work Management Staffing

## Expert, Cost-Saving Support for Key Utility Functions

Utilities are facing increased workloads and escalating costs as a result of aging infrastructure and an aging workforce.

To help utilities respond to this problem effectively, Osmose is offering professional support for targeted work processes. This support is built on specific areas of expertise—both in the field and in the office—that have value for utilities of all types.

## Use Osmose Expertise to Improve Performance

Osmose offers a combination of utility-specific skills and technology, a mobile and scalable workforce, and 70-plus years of T&D field project experience.

Now we're leveraging this expertise to provide professional staffing for technical and work management functions—reducing the demands on your own internal staffs. The goal is improved operational performance and reduced costs.

Depending on the assignment, trained Osmose personnel will be placed onsite in your offices, out in the field, in the Osmose data-processing center, or in any combination that's consistent with the project's complexity and scope.

## Service Options from Osmose

Osmose offers utilities the following professional staffing and work-management options:

- ▶ Overhead and underground distribution design services for facility upgrades, new services, and feeder hardening.
- ▶ Turnkey management of joint-use and third-party attachment requests, including make-ready design, negotiations, and post-construction audits.
- ▶ Work order design, generation, and backlog processing.
- ▶ Data updating and management for GIS, WMS, and other utility systems.
- ▶ Management of field data-collection and data-maintenance operations.
- ▶ Right-of-way permitting and resolution of issues such as clearance violations.
- ▶ Software-based solutions for management of data and business processes.

These services give you access to professional staff with the skill sets needed to outsource entire departmental functions or to augment your existing staff.
