

FastGate® Mobile for ArcGIS®

FastGate Mobile data-collection software provides advanced options for collecting field data and integrating it directly with ESRI's ArcGIS products. With

FastGate Mobile, your crews can take extracts of existing ArcGIS data to the field for updates and verification, collect new field information from scratch, or do both. Field crews gather data in a map-based interface, allowing efficient data collection on

Pocket PC-based devices. Integrated GPS and digital camera options also allow crews to capture location information and images in the same pass. FastGate Mobile includes extensions to ArcCatalog and ArcMap for defining the objects you want examined in the field, the attributes you need collected for those objects, as well as translations to features and tables in the geodatabase. In addition, users of ArcMap can select sets of data to be translated into FastGate Mobile for more targeted field audits.

Open up a whole new world of field data collection.

FastGate Mobile for ArcGIS: The integrated data collection and maintenance solution from Osmose.

Why Choose FastGate Mobile for ArcGIS?

- Allows an organized, consistent data collection process for ArcGIS users.
- Ideal for initial field data-collection, QA/QC, and ongoing data maintenance.
- Designed specifically for use in the field by any field personnel.
- Runs on PDA-sized devices for easy portability and use in the field.
- Developed by Osmose, industry leader in field inspection and data-collection.
